  - Average Incidence rate (/10,000/month)

Number of cases of the diseases in proportion to every 10000 populations.
The average incidence rate, that is the number of new cases reported by atolls in the same month of the previous year’s, in proportion to every 10,000 populations. Average incidence rate is calculated, (Average incidence = Average of new cases per month of previous years / Population of the atolls x 10,000).
